 **IFFCO ANIMAL NUTRITION**

Delivering Expert Nutritional Solutions.

IFFCO Animal Nutrition (IAN) is part of IFFCO Group, a global conglomerate with a strong global footprint across the food, agriculture, and nutrition sectors.

The company started with providing complete feed solution provider in 1999 and scaled to specialized business of tailor-made premixes & concentrates with strategically located Buhler plant at Port Khalid in Sharjah.

UNIFEED is manufactured in one of the most modern plant, under the most hygienic conditions. We use the best quality grains, grain by-products, agri-origin protein, vitamins and minerals, expertly milled and supported by a dedicated team of nutritionists. Drawing on our experience and knowledge, we have developed a comprehensive range of feeds that deliver consistent and high performance.

The company markets the products in the UAE and other GCC. All feeds under the UNIFEED brand are produced as per the standard specifications. UNIFEED is available to you in standard formulations or customer-made formulations especially designed to meet your individual requirements. UNIFEED is certified by ISO and HACCP.

Poultry feeds

Nourishing Poultry with Care and Precision.

Our poultry feeds are expertly formulated to provide complete and balanced nutrition for chickens, turkeys, ducks, and other avian species across all life stages. We understand that each stage of development, from chick starter to finisher, has unique dietary requirements. Therefore, our range encompasses specialized formulations designed to optimize growth rates, support robust immune systems, and enhance overall health and productivity.

livestock Feed:

The Foundation for a Healthy and Productive Herd.

The Foundation for a Healthy and Productive Herd” signifies our commitment to providing essential nutrition that underpins the well-being and performance of your animals. This feed is carefully formulated with a balance of vital nutrients, including energy sources, proteins, fiber, vitamins, and minerals, to support robust health, efficient growth, and consistent production.

GRAIN MIX

Quality Processing, Reliable Feed Ingredients

Quality Processing, Reliable Feed Ingredients” underscores our dedication to transforming raw materials into consistently high-grade components for animal feed production. Through meticulous processing methods and stringent quality control measures, we ensure that every ingredient we provide meets the highest standards of purity, nutritional value, and uniformity. This commitment to quality processing guarantees a reliable supply of essential building blocks, empowering feed manufacturers to create superior formulations that contribute to the health, growth, and productivity of livestock.

Benefits of Grain Mix

- Enhanced Digestibility
- Consistent Quality
- Improved Nutrient Availability
- Reduced Waste and Spoilage
- Improved Palatability
- Reduced Risk of Contaminants
- Optimized Feed Formulation
- Better Handling and Storage
- Increased Feed Efficiency

UNIMIXX - Tailor made solution for best-in-class performance

Our standard dairy cattle vitamin premix offerings contain highly fortified vitamins and trace minerals. IFFCO Animal Nutrition team is ready to provide the base for your nutritional plan whether you are building complete feeds, protein supplements or mineral mixes with below range of products.

MAXIMIZE HEALTH & PERFORMANCE THROUGH PREMIXES FOR PROFITABLE POULTRY

The Essential Foundation for Balanced Poultry Feed.

We offer poultry farmers a complete range and a wide selection of nutritional solutions in the form of premixes and Mineral, Vitamin supplements adapted to the precise needs of the animals. In particular, micro nutrition enables the provision of essential intakes according to the critical phases of breeding. The aim is to optimize performances and secure the health of the poultry. This is achieved by means of

- 🔥 An Adapted Formulation
- 🔥 The Use Of High Quality Raw Materials
- 🔥 Constant support with our wide range of analysis at Unilab.
- 🔥 Formulas Intended For Animals With High Genetic Potential
- 🔥 Intense quality check with end-to-end traceability

IAN Poultry Nutrition Program

Tailored Programs for Optimal Poultry Performance

Tailored Programs for Peak Poultry Performance" embodies our commitment to understanding the unique needs of your poultry operation. We develop customized nutritional strategies, leveraging our expertise and high-quality feed solutions, to address specific growth targets, health requirements, and production goals.

By providing precise feeding plans designed for your flock's specific stage and breed, we empower you to achieve optimal performance, maximize efficiency, and ultimately enhance the profitability of your poultry business.

| Types Of Premixes | Inclusion Rate |
|---|----------------|
| Premixes with Vitamin & Trace Elements | 0.1% - 0.2% |
| Premixes with Vitamin & Trac Elements + Amino Acids | 1% - 2% |
| Premixes Concentrate | 2.5% - 5% |

Breeder Nutrition Program

RUMINANT NUTRITION PROGRAM

Optimize Growth, Boost Immunity, Maximize Profit.

It is a unique and effective approach to dairy nutrition, designed with cutting-edge solutions. When used as key elements in a well-managed calf nutrition program, IAN Calf Starter and Calf Builder can optimize efficiency and calf growth rates and support immunity, thus contributing to increased profit potential.

Today there is a need to focus on Calf nutrition, Calf health & reduction in mortality at early stage of life, Calf weight & early weaning, Calf Scour, proper gut & rumen micro flora development & that is possible with IAN Calf Nutrition Program.

🔥 Calf Premix

🔥 Fresh Cow Premix

🔥 Dry Cow / Far off Premix

🔥 Heifer Premix

🔥 Close up Premix

🔥 High Cow / Milking Premix

VITAMINS & MINERALS PREMIX FOR DAIRY COW NEEDS

Providing the Complete Vitamin & Mineral Support Your Cows Need

Nutrition starts with complete, personalized rations for cows and heifers. Our variety of dairy cattle vitamin premixes allows industry professionals to provide animals with feed that has the potential to positively affect cow performance and add value to a producer's bottom line.

Today the requirement of quality Premix by modern dairy animals in their diets for optimum performance is increasing. Because the dairy cows are under stress for below reasons.

- 🔥 The genetic improvement resulted in high milk yield & reproductive traits so the nutritional requirement also increased.
- 🔥 The change in environmental temperature, lack of suitable fodders, Intensive milk production & water shortage define the need of new concepts in Dairy Premix.
- 🔥 Adding to the bio-security & herd health, emergence of new diseases created thought process for designing new generation Dairy Premix.
- 🔥 Example- Frequent repeat breeders, Mastitis, Parasitic infestations, Calf mortality etc.

Backed by IAN, Driven by Quality, Trust & Reliability.

UNILAB is part of IFFCO Animal Nutrition where we strive to ensure consistent Quality for our customers each time.

At Unilab, we offer a broad range of analytical services as part of our customer centricity initiative. We have a state-of-the-art lab facility with equipment's like HPLC (MS), GC, ICP – MS, NIRS to perform a wide range of analyses.

At UNILAB we analyse different raw materials, forages, macro & micro ingredients like carbohydrates, fat, proteins, amino acids, minerals, vitamins, etc.

We offer below analytical services:

Feed Analysis: analysis of feed materials and finished feeds for a broad range of parameters including crude protein, crude fiber, ash, moisture, starch, salt and mineral content etc. A broad range of methods are available focused on either traditional 'wet' chemistry techniques or NIR spectrophotometry, which offers cost effective, rapid results.

Forage Analysis: UNILAB analyses broad range of parameters including crude protein, crude fiber, ash, moisture, starch, salt and mineral content etc.

Mineral Analysis: Mineral profile of feed, feed raw materials, forages is done using ICP (Inductively coupled plasma) Technique. This is also done for premixes.

Vitamin Analysis: Vitamin A, D3, E & B Complex are analyzed using HPLC (High Pressure Liquid Chromatography) Other Services: Mycotoxin Screening & Amino Acids (Lysine, Methionine, Threonine) analysis.

FEED ADDITIVE

UNIADD by IAN, offers complete innovative range of feed additives because every feed deserves the best additive.

UNIADD offers solution for challenges like mycotoxin exposure, gut health challenges, mould inhibition, moisture management, acidosis in cattle, poor pellet durability,
